

## Eurofrigo's manufacturing set up is hard to match

EUROFRIGO has been producing advanced refrigeration systems for vans and commercial vehicle for more than thirty years and remains at the forefront of the European refrigeration industry by virtue of its pro-active approach to product design. The company's modern, purpose-built, flexibly equipped production facility in Reggio Emilia, Northern Italy, is fully geared up to produce an extensive range of units – with a capacity to produce more than 3000 units a year. The company's refrigeration units are now sold in more than 65 countries around the world through a select network of distributors, dealers and service agents.

Emphasising Eurofrigo's tried and tested manufacturing approach, a senior spokesman in the UK said: "Our ongoing commitment to product improvement and customer service enables us to remain at the very forefront of the European fridge manufacturing industry. Like leading manufacturers in other industry sectors, we continually strive to simplify the design and construction of our equipment. As a result, we have succeeded in making our refrigeration units more reliable, more efficient, more operator-friendly, less prone to failure and easier to repair. All of our core materials and components are

purchased from internationally renowned suppliers to ensure high levels of product reliability, quality and efficiency."

The majority of Eurofrigo's fridge models share a similar core of base components, which not only streamlines the manufacturing process, but also simplifies routine maintenance and

repair work and stock holding. Eurofrigo has its own dedicated parts holding facility in the Midlands and offers a next day parts delivery promise on all core components. The company has also joined forces with the UK's leading provider of refrigeration support services to give customers nationwide support. **RE24**
